

STRATIFICATION ÉCOFORESTIÈRE

Table of parameters used for cartography, including codes for forest types and their characteristics like height and reproduction.

Example of strata classification table showing codes and their corresponding characteristics.

TYPES DE COUVERT ET ESSENCES SELON LE PROGRAMME D'INVENTAIRE

RESINEUX: Peuplement dont plus de 75% de la surface terrière totale est occupée par les essences résineuses.
FEUILLEUX: Peuplement dont plus de 75% de la surface terrière totale est occupée par les essences feuillues.
MELANGES: Peuplement dont les essences feuillues et résineuses occupent indistinctement plus de 25% et moins de 75% de la surface terrière totale.

Table of forest codes and species names, categorized by resinous and deciduous types.

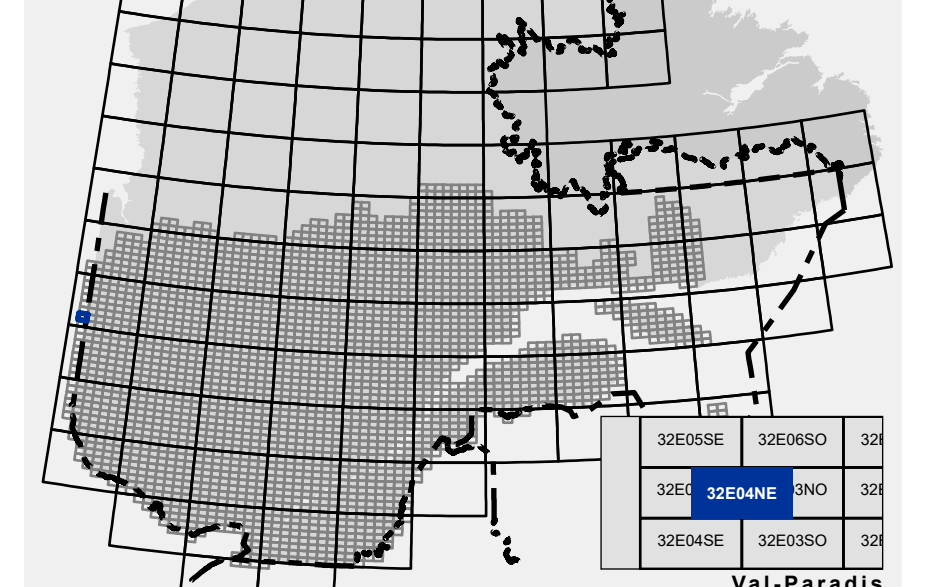

Table of average height and dominant species indices, including columns for species codes and average heights.

Table of age classes, detailing the number of trees per hectare in different age groups.

Table of perturbations and interventions, listing codes for various forest management actions and their descriptions.

Table of forest terrain types and slope classes, defining codes for different terrain conditions and slope percentages.

SERIE PEUPLEMENTS ECOFORESTIERS 1/20 000

Legend for communication routes, obstacles, and infrastructure, including symbols for roads, buildings, and hydrography.

Legend for contour lines and boundaries, including symbols for different types of boundaries and contour intervals.

Legend for eco-forest population, including symbols for different population types.

Legend for metadata, including information about the map's projection, datum, and scale.

Legend for sources and realization, including details about the data sources and the organization responsible for the map.
